

How To Get More Encore® Azalea Blooms

Sunlight

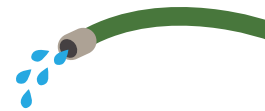

For maximum blooms, your Encore® Azaleas need **4-6 hours of sunlight**, preferably morning sun or filtered sun.

Moisture

Adequate moisture is most important in late spring or early summer when flower buds are being formed.

Encore Azaleas don't normally require extra watering, but during dry periods, this can affect bloom production.

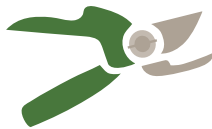

Proper Pruning

Encore Azaleas require very little pruning.

If you *do* need to prune, make sure to do so after they bloom in the spring.

Pruning before or after that may sacrifice future blooms.

Adding Fertilizer

Encore Azaleas don't normally need fertilizer, but on underperforming Encores, **adding an azalea fertilizer can help create more bloom production.**
